## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement filed 1/12/04 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 52-55 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Lines 9-11 of claim 1 recite that the "distal region of the wire support radially expands in response to distally directed anatomical forces on the tubular wire support to increase resistance to distal migration of the prosthesis." Nowhere in the specification is there any description of these anatomical forces. The only mention of the word anatomical in the specification is on line 5 of paragraph [0074] and that is describing the end of the stent in figures 17 and 18. The

Art Unit: 3738

examiner is unclear what forces the applicant is describing. The examiner is only aware of radial expansion forces, which the examiner believes do not qualify as distally directed anatomical forces. Further clarification of the relation of these forces is needed.

In light of the 112 new matter rejection described above the current application is being given the priority date of the filing date of the current application. The current application is a continuation of application 10032230, but the new matter is not described in either application so the priority date is 1/12/04.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 52-55 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent Publication 2001/0039450 Pavcnik.

Pavcnik discloses the same invention being an endoluminal prostheses comprising a self expanding wire support frame (11) and a ePTFE polymeric sleeve (75) that expand from a first smaller diameter to a second larger diameter. The device disclosed by Pavcnik has the same structure as that of the current application so it is inherent that it will expand in response to distally directed anatomical forces on the tubular wire support in the same manner as that of the current application.
